

Development of a Collaboration Platform

The Client

Customer is a leading global collaboration network for the electronics industry. They provide services in a SaaS model.

The Challenge

The client needed assistance with the initial setup, development, and implementation of their core services platform. They also required strong Project and Process Management support to manage its numerous projects.

The Solution

Mindteck set up a 15-person team of skilled Project Managers, Technical Leaders and Engineers onsite in a very short span of time and helped them tide over the early growing pains of a start-up. We also established strong development, and project management processes within the organization.

The Benefits

Mindteck team helped the client in setting up initial processes required for support and maintenance of the application and also provided the development of the platform within time and cost.

The Technology

- J2EE on BEA Web Logic platform
- IBM Tivoli for Security and Identity Management
- i2 Supply Chain software
