

Development of BMS Pump Software Simulator

The Client

The Challenge

The Client wanted Mindteck to develop a Custom Software that is based on dot Net Framework for their BMS Pump.

The Solution

This software simulator was build using C# on Dot Net framework 2.0. Advanced concepts such as cluster computing and remote operations were used in this software simulator Development. Visual Studio 2005 was used in the development of the Simulator. The Simulator application was deployed on cluster of nodes running on Windows XP OS.

The Benefits

- Enhanced functionality of the Software
- Advanced platform of existing environment
- Increased efficiency and data retrieval made easy

The Technology

- Microsoft® Office
- Microsoft® Office Live
- Microsoft® Visio
- Microsoft® Office Project
- Microsoft® Visual Studio®
- Other Microsoft Products
